

## QUESTIONS & ANSWERS

#	Question	District Response
1	Just one quick question, is Patrick ES supposed to be on Attachment A twice, or is that just an accident?	That is a clerical error, please disregard.
2	It appears that you are requesting quotes for a transport connection to the Southern Oregon ESD in your C1 leased fiber services RFQ that you released at the same time as this one. So would this DIA circuit to the district HQ be used as a backup? Or load balancing to supplement the IAS you would be getting from the ESD?	It's connected to our District Office directly, and we use it to route traffic destined for the ESDs network through that link for administrative purposes, and things like offsite backups. We are looking to add more ESD-provided services this year, and over the coming years to help augment the services my small team provides to our district, which will only increase the traffic traversing that link.
